

JOSHUA

A French Quarter Bear Tale — Group Updates Guide

Jackson Square: St. Louis Cathedral, the Cabildo & Presbytère, and the Pontalba galleries — the whole game map is the real French Quarter, built from OpenStreetMap.

There's a bear named Joshua. He woke up in a gutter outside Lafitte's Blacksmith Shop with a headache, a red bow tie, and a collage scattered across the entire French Quarter. He needs \$500 for a flight home. **You can change his world** — add enemies, secrets, sounds, jokes, whole new toys — just by writing a note.

Play the game: <https://jbvyvf67cb-ai.github.io/wutang-arcade/>

Works in any browser — laptop, or a recent iPhone/Android. WASD + Space to move, J to claw, K to drop the Groove.

Four update rounds, every day (US Central)

8 AM

1. COLLECT

every note in the queue is read

2 PM

2. BUILD

Claude changes the game code

8 PM

3. CHECK

nothing may break the game

12 AM

4. PUBLISH

new version goes live + summary

How to add your idea (no coding, ~2 minutes)

Requests live in a folder called **updates/queue** in the game's GitHub project. You add a plain text file there through the GitHub website — that's the whole job. You need a free GitHub account and an invite to the project (ask whoever sent you this guide).

STEP 1 — Open the queue folder

github.com

github.com/jbvyvf67cb-ai/wutang-arcade

updates / queue

☐ .gitkeep

☐ README.md

Add file ▾

Sign in to GitHub, open the repo, click into updates then queue, then Add file → Create new file.

STEP 2 — Name it & write your idea

github.com

tasha-streetcar-bell.txt

Name the file: yourname-your-idea.txt

Make the streetcar ring a bell when it stops, and let me ride on its roof to jump onto the Jax Brewery balconies.

Also the bell should scare nearby pirates so they run away for a few seconds. Feels like a fun escape move.

Plain English. One idea per file.
Say WHAT, WHERE, and how it should FEEL.

STEP 3 — Commit (save) it

github.com

Commit changes...

Commit message (optional)

streetcar bell idea

Commit changes

Click the green button (twice).
Done! Your idea is in the queue for the next update round.

The three clicks, spelled out

1. Go to github.com/jbvyvf67cb-ai/wutang-arcade and sign in. Click the **updates** folder, then **queue**.
2. Click **Add file** → **Create new file**. In the name box type **yourname-your-idea.txt** (example: *marcus-more-pirates.txt*). Write your request in the big box below, in plain English.
3. Click the green **Commit changes...** button, then **Commit changes** again in the popup. Done — your note is in the queue. At the next round (8 AM / 2 PM / 8 PM / midnight Central) it gets built into the game.

On your phone? The GitHub website works fine in a mobile browser — same three steps. If the editor looks cramped, request the desktop site.

Writing a request that turns out great

The builder is an AI (Claude) with full creative license over the details — but it can't read your mind. The more your note says about **WHAT** you want, **WHERE** it happens, and **how it should FEEL**, the closer the result lands to what you imagined.

Too vague	<i>"make the game better"</i> — the builder has to guess everything; you might get anything.
Good	<i>"Add more pirates near the river."</i> — clear what and where. The builder picks the how.
Great	<i>"Add a pirate captain mini-boss on the Moonwalk steps by the river. Slower than the Huntress but with a cannon that shoots beads. Beating him should feel like a real victory — maybe 50 doubloons and a cheer sound."</i> — what, where, how it behaves, and how winning should feel.

Include these details when you can

- **Where:** use real places — Bourbon Street, Jackson Square, Café du Monde, Royal Street balconies, Pirate's Alley, the Mississippi, Preservation Hall, Lipstixx... the map is the real Quarter, so landmark names work.
- **How much:** "a little faster", "twice as many", "rare — hidden in one spot".
- **The feeling:** "goofy", "spooky", "satisfying crunch", "should make my mom laugh".
- **When:** the game has a clock (8 AM to neon dusk) — you can ask for things that only happen at night, or when a shop opens.

Idea menu (steal these)

New enemies or a boss · secret coin stashes · new sounds or music tweaks · balcony parkour routes · jokes and gag messages · new stuff inside the shops and bars · weather · a new power-up · pigeons · making the Huntress scarier · racing the streetcar · anything that made you grin in a N64 game.

House rules

- One idea per file (submit as many files as you like).
- Keep it playable — requests that would break the game or its budgets get scaled back, with an explanation.
- If two people ask for opposite things in the same round, the builder makes a judgment call and explains it in the summary.

The world you're editing

Screenshots from the live game — name these places in your requests.

Bourbon Street at dusk — packs of pleats (the frat boys), iron galleries, and the travel agency selling the \$500 flight home (next door to Lipstixx, where the finale happens).

Café du Monde — green-striped canopy, marble tables, beignets that heal Joshua's bow tie, and a powdered-sugar cloud gag.

The Mississippi is real water — Joshua swims it for floating doubloons. Pirates patrol the Moonwalk and the French Market. The Riverfront streetcar runs the levee and you can ride it.

Seven real places open up as the day passes — the voodoo shop at 10, the bars at 11, Preservation Hall at 5 (someone hands the bear a tambourine).

What happens to your request

1. At the next round, the builder reads every note in the queue alongside the game's design contract, makes the changes, and verifies the game still builds and runs on budget.
2. About 15–30 minutes after the round starts, the live game updates at <https://jbvyvf67cb-ai.github.io/wutang-arcade/> — refresh and play.
3. Your note is moved to **updates/processed/<date>/** next to a **SUMMARY.md** explaining exactly what was done with each request — or why something was scaled back or skipped. That's also where to look if your idea didn't show up.

4. The queue is empty again, ready for the next round. There is no limit — the game keeps evolving as long as people keep writing notes.

"Reality is merely another kind of wonder." — Ram Dass. Game map: © OpenStreetMap contributors. Built and updated by Claude.
